

ATD Pressure Gas System presents

The Cardox Chronicle

ATD Pressure Gas System Newsletter

April 2015

Greetings from ATD-PGS!

New ATD Straight Shot and Target Blaster technology with 100% Locking Collar (patent pending).

Since the early 1950s, ATD has been providing Cardox technology for removing material build up in many industrial processes. We were the first to successfully clean a rotary Kiln in 1961, and since that time we have been on the cutting edge supplying our customers with a wide range of Cardox and specialized drilling equipment for tackling build up in all types of applications. Our continued product advancement comes from our experience out in the field as well as the important feedback from our valued business partners all over the world.

Although we are very proud of our past, we are always working on product development for the future. ATD now has patented Straight Shot technology as well as a Target Blaster that allows an operator to safely remove build up in tough to reach and adverse conditions.

This technology can be used with your existing ATD equipment! The 100% locking collar eliminates the possibility of launching a tube and can be used for high heat applications as your loaded tube will not be exposed to heat.

ATD will have an exhibit at the IEEE/PCA Cement Conference in Toronto April 26th -30th. We will have our new Straight Shot, Target Blaster and 100% Locking Collar on display. Please stop by our booth #524 and say hello.

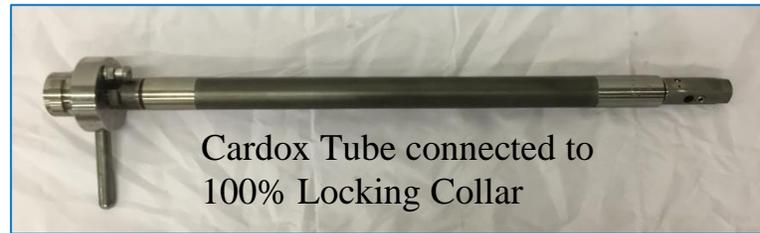

New Straight Shot Discharge Tube with 100% Locking Collar

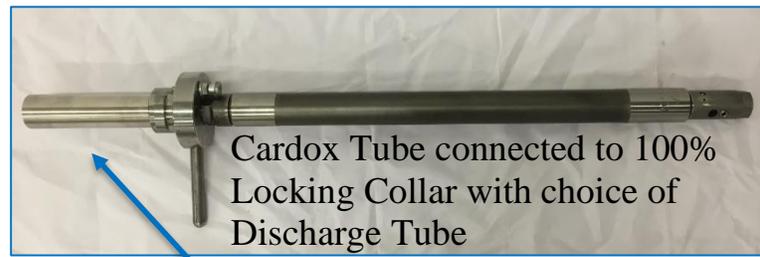

- ✓ New 100% Locking Collar insures no possibility of launching a tube!
- ✓ Loaded tubes are no longer exposed to high heat
- ✓ Remove build-up that would normally be out of reach
- ✓ New heat resistant Discharge Tubes
- ✓ Coolers – Use Straight Shot to knock down that Snowman threatening the next shutdown!
- ✓ Pre-heater- Kilns
- ✓ Bulk Silos
- ✓ Specialized tubes can be inserted in tough material reducing or even eliminating drilling.
- ✓ This technology can be used with your existing ATD equipment!
